Gamajet E-Z8 - Flow Rate vs. Typical Full Cycle Time

A fast, easy-to-handle way to clean a wide variety of tanks.

The Gamajet E-Z8 is designed to provide the **same flow as traditional large-scale tank cleaners**, but in a smaller self-contained unit.

The unit is lighter, shorter and narrower than any other fluid driven system with similar flow characteristics. Its **compact size** and light weight allows easier handling and maneuverability while still maintaining the flow rates to clean larger tanks. In addition to its high flow rate, the E-Z8 develops a cleaning pattern that is twice as tight as other tank cleaners. This insures a complete scouring of every square inch of the tank or process vessel. A choice of nozzle sizes and stators offers a range of flow rates, pressures and wash cycle times so the E-Z8 can be tailored to your cleaning specifications.

Designed for maximum reliability and a minimum of maintenance the user-friendly **Gamajet E-Z8** is manufactured in the USA. If required, a complete supply of replacement parts is available for immediate shipment from our US headquarters.
